CONCEPT 1

Unified Operations

The most complete full-suite story. It balances executive visibility, cross-module navigation, phone usability, and tablet credibility without feeling narrow or overloaded.

BEST USE

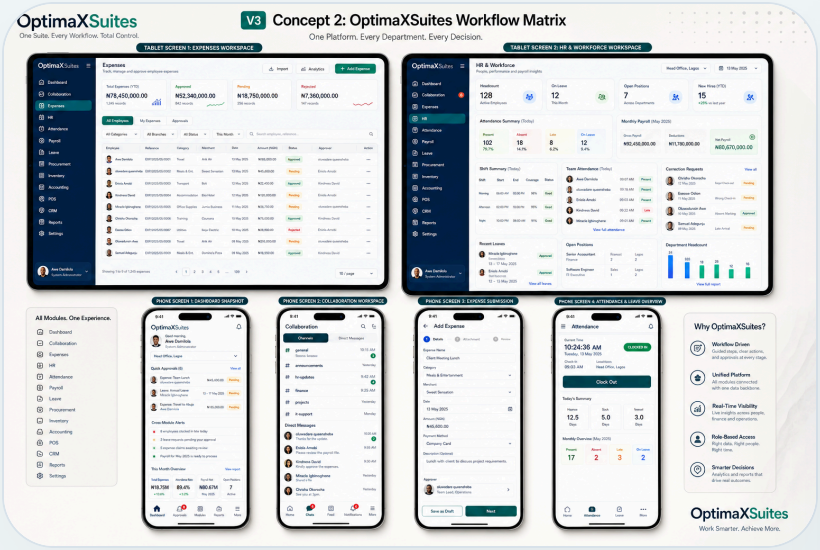

Primary product direction for OptimaXSuites mobile and tablet rollout

STRENGTHS

Best platform narrative, broadest module coverage, strongest all-around balance

TRADEOFF

Less workflow-explicit than Concept 2 and less executive-dense than Concept 3

CONCEPT 2

Workflow Matrix

The strongest departmental workflow concept. It is especially good for Expense, HR, Workforce, approvals, and role-based daily operations.

BEST USE

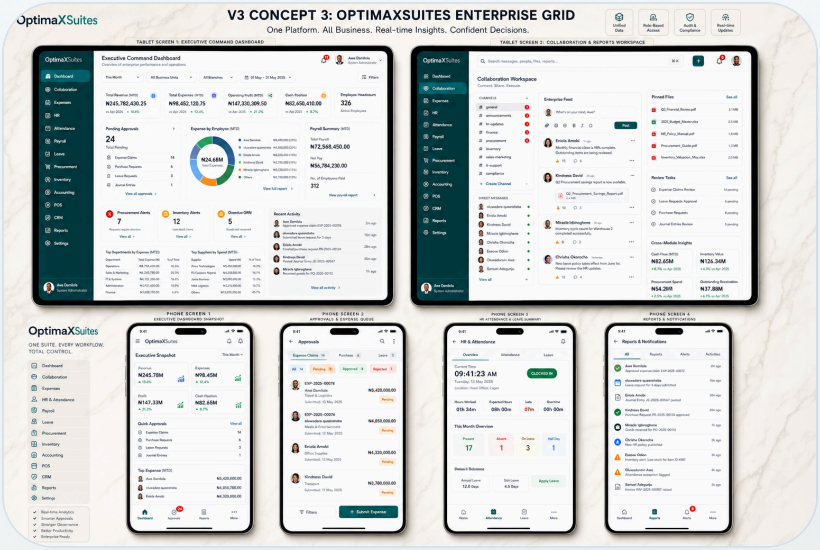

Operations-led rollout and day-to-day team execution

STRENGTHS

Strong HR plus Expense blend, clear progression, practical staff flows

TRADEOFF

Slightly less “single suite command center” than Concept 1

CONCEPT 3

Enterprise Grid

The strongest executive and governance concept. It works best when leadership, finance, and operations need denser insight, stronger reporting, and approval oversight.

BEST USE

Executive, finance, governance, and reporting-heavy deployment

STRENGTHS

Strongest analytics, oversight, reporting, and enterprise control feel

TRADEOFF

Slightly heavier than Concept 1 for casual users
