EMR Platform

"Electronic medical records"

Overview

EMR is a platform that is integrated with third-party applications that allow physicians to receive patients' messages, calls, voice notes, etc., and collect and save them as their patients' health records.

Tremoloo is a digital product design studio based in Cairo that specializes in creating digital products that customers actually use, Tremoloo is well known for its own methodology that puts the customer at the heart of the design process, decreasing the uncertainty and the time and effort spent.

Scope —Roadmap.

1. MVP for a Mobile App and Web app.
2. Cross-platform iOS and Android.
3. English.
4. Industry/Field: Medtech.

Goals of the project

1. **Business Goals.**
    a. Introduce physicians to a unified way of storing their patients' data.
    b. Integrate with insurance companies to automate processes.
2. **Collaborative goals.**
    a. MVP for a mobile app and Web app.
    b. Cross-platform iOS and Android.
    c. English.
3. **User Goals.**
    a. Avoid the hassle of manual labor.
    b. Store information from patients.
    c. Save patients' health records.

My Users —user persona.

I. **Physician:**

- A practicing doctor who is living in Namibia.
- A well-organized person who wants to keep track of all the received calls and messages.
- Someone who wants every record saved in one platform.
- Get calls 24/7 for medical emergencies.
- Has to work at a facility during the day-time.

Needed Jobs to be done —Per User Types.

Please check over this brief and ensure all details are correct. This is what we'll be continuously referring back to throughout the project.

Scope "**Done**" Definition:

1. Technical requirements are **accurate**.
2. All users/**proto-personas** of this product are known.
3. Below-mentioned **activities** meet **user needs**.
4. Resolved all **comments** by the project owner if any.
5. **Final approval** by the project owner.

Web app/Mobile app users —User types.

- **Physician**

Features Summary

User	Features
1. Physician	• Register. • Dashboard. • Patient records. • Prescriptions. • Payment/Insurance.

Physician

“Mobile and web App”

I. Register/Login

“Feature Description: Register and log in to the platform”

1. As a Physician, I should be able to register using my phone number.
2. As a Physician, I should be able to receive a text message to confirm my number.
3. As a Physician, I should be able to set a password.
4. As a Physician, I should be able to log in using my number and password.

Related data input:

- *Phone number.*
- *Password.*

II. Dashboard:

“*Web App”*

“Feature Description: View all sections of the dashboard”

1. As a Physician, I should be able to view my dashboard.
2. As a Physician, I should be able to add patients:
    a. Full name.
    b. Date of birth.
    c. Gender.
    d. Contact information.
    e. Insurance details.

3. As a Physician, I should be able to integrate my system with my communication platforms: WhatsApp, voice calls, text messages, video messages, etc.
    a. I need to be able to choose my patients from my contacts.
    b. I need to be able to allow the app to access my patient's contact information and receive their messages.
    c. I need to be able to remove, add, or edit patients' contact information.
4. As a Physician, I should be able to view and create a medical history record for each patient.
    a. I need to be able to manually add or edit information.
5. As a Physician, I should be able to search by patient name.
6. As a Physician, I should be able to view my patients' list.
7. As a Physician, I should be able to filter the patients' list.
8. As a Physician, I should be able to receive notifications if any patient sends a message, voice note, photos, etc.
9. As a Physician, I should be able to view missed calls of the patients.
10. As a Physician, I should be able to view each patient's history:
    a. Calls.
    b. Messages.
    c. Voice notes.
    d. Photos.
    e. X-rays.

Related data input:

- *Patient's details.*

III. Dashboard:

"Mobile App"

"Feature Description: View all sections of the dashboard"

1. As a Physician, I should be able to view my dashboard.
2. As a Physician, I should be able to search by patient name.
3. As a Physician, I should be able to view my patients' list.
4. As a Physician, I should be able to filter the patients' list.
5. As a Physician, I should be able to receive notifications if any patient sends a message, voice note, photos, etc.
6. As a Physician, I should be able to view missed calls of the patients.
7. As a Physician, I should be able to view each patient's history:
    a. Calls.
    b. Messages.
    c. Voice notes.
    d. Photos.
    e. X-rays.

IV. Patient records

"Feature Description: View details of each patient"

1. As a Physician, I should be able to view the patient records page.
2. As a Physician, I should be able to view/add/edit Patient demographics:

a. Full name.
b. Date of birth.
c. Gender.
d. Contact information.
e. Insurance details.

3. As a Physician, I should be able to view/add the patient's medical history:
    a. Past illnesses.
    b. Medical conditions.
    c. Surgeries.
    d. Allergies.
4. As a Physician, I should be able to view/add the patient's medication list:
    a. Medications the patient is currently taking.
    b. Name of the medication.
    c. Dosage and frequency.
    d. Past prescriptions/medications and any allergies or reactions to specific medications.

Related data input:

- *Patient's details.*

V. Prescriptions

"Feature Description: View/write prescriptions"

1. As a Physician, I should be able to check patients' received reports, X-rays, and relevant documents.
2. As a Physician, I should be able to e-write a prescription according to the diagnosis of the patient.

3. As a Physician, I should be able to add the necessary information for the prescription:
    a. Medication name.
    b. Dosage, frequency, and duration.

Related data input:

- *Prescriptions.*

VI. Payment//Insurance:

"Feature Description: Manage payment and insurance"

1. As a Physician, I should be able to add/view a list of insurance companies that are collaborating with me or with my facility.
2. As a Physician, I should be able to view different policies and plans.
3. As a Physician, I should be able to link patients with insurance companies:
    a. Insurance company name.
    b. Policy number.
    c. Group number.
    d. Any other relevant information.
4. As a Physician, I should be able to automatically know the deducted amount after insurance.
5. As a Physician, I should be able to submit claims to insurance companies.

Inspiration:

https://openmrs.org/

Assumptions:

1. Tremoloo will deliver designed experiences with no development involved.
2. The project owner needs to assign one project Manager, to work and support Tremoloo's team.
3. The project owner will be responsible for any changes to the cost or schedule resulting from any delay or inability to meet the responsibilities outlined in the proposal If the delay is from their side. otherwise, it will be Tremoloo's responsibility.
4. Tremoloo is not responsible for any drastic changes in the pre-approved scope mid the design process.
5. Tremoloo is responsible for maintaining a coherent team and quality throughout the design process.
6. Any additional services required after securing the deal call for a new proposal.

Risk Management:

This applies to both negative and positive risks.

1. Analyzing the objectives and business impact of the project.
2. Identifying possible risks of the project.
3. Plan for proper approaches.
4. Discuss approaches with the project owner.

Upon acceptance of the proposal

- ✓ The scope includes the focus of the design team, along with one account manager and quality assurance services; unless otherwise noted, our week starts on a Sunday and ends on Wednesday.
- ✓ Each Week, we'll meet to review the prior week and plan out the details of the upcoming week.
- ✓ Project updates will be sent to the Client on a slack shared channel.
- ✓ The Client is responsible for reviewing and providing feedback on all deliverables and questions within one business day of submission.
- ✓ When comments are done and the document has been approved a proposal will be sent within 1 - 2 business days to the project owner.
- ✓ Tremoloo will assign a design team to lead the Kick-off meeting and set the expectation and timeline.
