OPTIMAX ENTERPRISE MOBILE

# Dashboard, Expense, and HR Attendance Native App Review

This deck proposes a mobile-first, enterprise-grade product direction for the highest-frequency employee workflows: visibility, expense submission, and attendance action. The target is a calm, native-feeling experience that improves speed without losing operational clarity.

**FOCUS MODULES**
Dashboard, Expense, HR Attendance

**PRIMARY USERS**
Employees, managers, executives

**RECOMMENDED DIRECTION**
Concept 2 with select traits from 1 and 3

### PHASE 1 PRIORITIES

- Fast clock in and clock out with immediate state confirmation
- Guided receipt-to-claim expense flow with policy awareness
- Role-aware dashboard with pending approvals and business health snapshot
- Unified bottom navigation with clear task ownership

### SELECTION GUIDANCE

- Choose Concept 1 if executive polish is the main driver
- Choose Concept 2 if broad staff adoption is the main driver
- Choose Concept 3 if operational depth is the main driver
- Blend them if the final app must support all three audiences strongly

PRD source: `docs/native-app-prototype/prd.md`

CONCEPT 1

# Executive Clarity

Best for leadership visibility and premium KPI storytelling. The layout foregrounds confidence, summary insight, and clean decision points.

**BEST USE**

Executive dashboarding, manager approvals, polished first impression

**STRENGTHS**

High-trust look, balanced density, crisp status cues, strong boardroom appeal

**TRADEOFF**

Slightly less guided for first-time or process-heavy users than Concept 2

Recommended when stakeholder confidence and a premium leadership view are more important than step-by-step operational handholding.

CONCEPT 2

# Guided Momentum

Best for broad employee adoption. This direction emphasizes next actions, guided flows, and task completion with a friendlier enterprise tone.

**BEST USE**

Daily staff workflows, fast onboarding, scalable adoption across teams

**STRENGTHS**

Clear action hierarchy, guided expense submission, approachable attendance flow

**TRADEOFF**

Slightly less analytical and executive in tone than Concepts 1 and 3

This is the best default foundation for the first release because it keeps users moving without dumbing the product down.

CONCEPT 3

# Precision Workspace

Best for operations-heavy teams that need denser information, sharper controls, and more structured drill-down behavior.

**BEST USE**

Managers, operational leads, exception handling, detail review

**STRENGTHS**

High information yield, stronger policy and exception framing, richer analytics cues

**TRADEOFF**

Heavier cognitive load for casual or infrequent users

Recommended as a source of patterns for manager views and advanced screens, even if the overall product tone follows Concept 2.
